How to replace nozzle

ATTENTION!! Nozzle temperature is very high, be careful to operate!

Step1: Preheat nozzle, waiting for nozzle temperature reached, and take out filament from extruder.

Step2: Keep nozzle temperature, move up the hotend, remove the nozzle with a wrench.

Step3: Keep nozzle temperature, screw in a new nozzle with a wrench, and then tighten it to the hotend.

| Preheat nozzle and remove filament | Remove nozzle with wrench | Replace a new nozzle | tighten the nozzle with a wrench |
